

(三十一) Generative Adversarial Network.

生成对抗网络.

$$\text{国定: } P_{\text{data}}(x) = \{x_i\}_{i=1}^N$$

$$\text{工艺品: } P_g(x, \theta_g) = \text{generator}(P_z(z) + G(z, \theta_g))$$

鉴别专家: $y|x$ discriminator

$y x$	1	0
P	$D(x)$	$1-D(x)$

- 目标: ① 鉴别专家鉴别能力强 (手段)
- ② 工艺大师制造能力强 (目标)

$$\min_{G, D} \max_{x \sim P_{\text{data}}} E_{x \sim P_{\text{data}}} [\log D(x)] + E_{z \sim P_z} [1 - \log D(G(z))]$$

$$\text{记 } V(D, G) = E_{x \sim P_{\text{data}}} [\log D(x)] + E_{z \sim P_z} [1 - \log D(G(z))]$$

① for fixed G , 求 $\max V(D, G)$

$$\begin{aligned} \max_D V(D, G) &= \int P_{\text{data}} \log D(x) dx + \int P_g (1 - \log D(x)) dx \\ &= \int [P_d \log D(x) + P_g (1 - \log D(x))] dx \end{aligned}$$

$$\begin{aligned} \frac{\partial}{\partial D} &= \int \frac{\partial}{\partial D} [P_d \log D(x) + P_g (1 - \log D(x))] dx \\ &= \int [P_d \frac{1}{D} + P_g \cdot \frac{-1}{D}] dx = 0 \end{aligned}$$

$$D_G^* = \frac{P_d}{P_d + P_g}$$

② 将 D_G^* 代入 $V(D, G)$

$$\min_G \max_D V(D, G) = \min_G V(D_G^*, G)$$
